Introduction

Summary plots and initial insights from:

- Section A: Experience and impact of WERC
- Section D: The future of WERC

Reading data

Data were downloaded from Google Drive and saved locally in the `data/` directory.

Section A: Experience and impact of WERC

How long have you been a member of WERC?

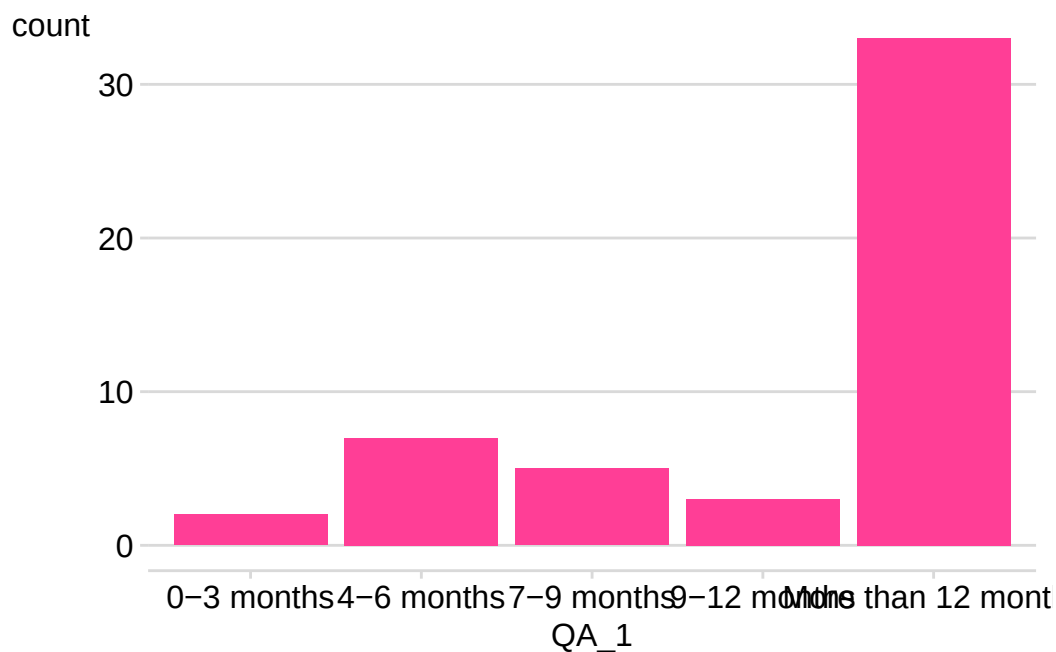

Two-thirds of respondents have been WERC members for more than 12 months. Of the remainder, 16% have been members between 7-12 months, and 18% up to six months.

! Important

Is this representative of the membership?

QA_1	n	percent
0-3 months	2	4.0%
4-6 months	7	14.0%
7-9 months	5	10.0%
9-12 months	3	6.0%
More than 12 months	33	66.0%
Total	50	-

QA_2	n	percent
Facebook	22	44.0%
Word of mouth	15	30.0%
Google/other search engine	8	16.0%
Seeing the club in park	2	4.0%
Club website	1	2.0%
Race event	1	2.0%
Seeing someone in club merch	1	2.0%
Total	50	-

How did you find out about WERC?

Most respondents heard about the club through the internet: 44% from Facebook (44%), or a search engine (16%), with a comparatively small number (2%) through the website (although the latter two categories are likely synonymous). Around 30% hear about the club through word of mouth, with the remaining 10% from seeing the club in the “real world”. These results suggest a strong

fct_rev(fct_infreq(QA_2))

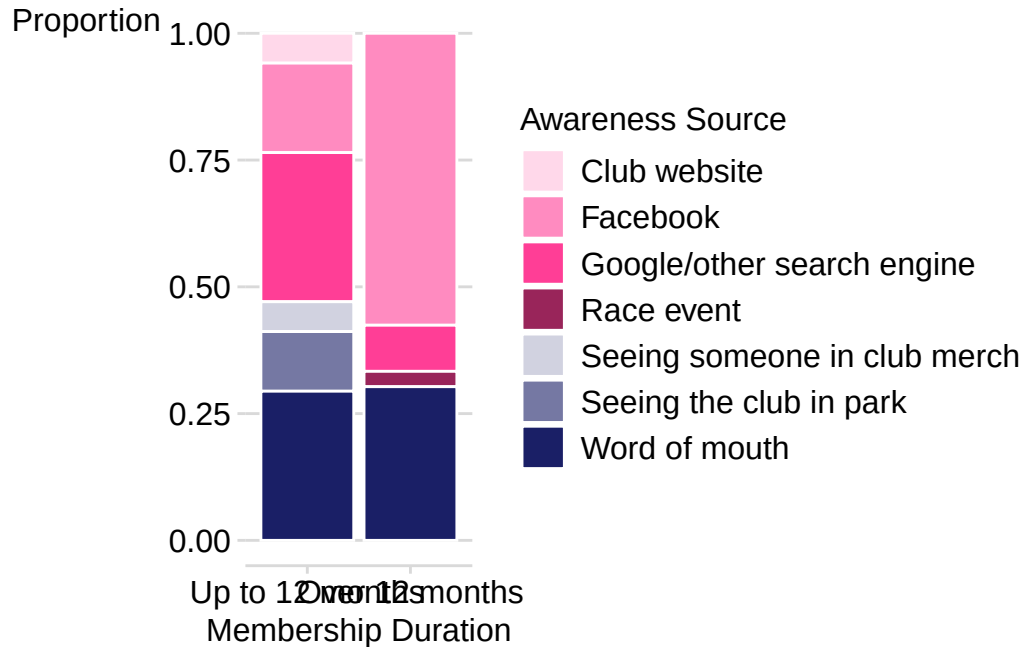

Is there a link between time in club and how they heard about it?

Have more recent members of the club heard about the club in different ways to longer members? Sample counts are very small for the >12 months category, so we collapse into those in the club over 12 months, and those in the club 12 months or less.

	Club website	Facebook	Google/other search engine
0-3 months	1	0	1
4-6 months	0	2	1
7-9 months	0	1	1
9-12 months	0	0	2
More than 12 months	0	19	3

	Race event	Seeing someone in club merch
0-3 months	0	0
4-6 months	0	1
7-9 months	0	0
9-12 months	0	0
More than 12 months	1	0

	Seeing the club in park	Word of mouth
0-3 months	0	0
4-6 months	2	1
7-9 months	0	3
9-12 months	0	1
More than 12 months	0	10

Pearson's Chi-squared test

data: tab2

X-squared = 15.244, df = 6, p-value = 0.01844

	Club website	Facebook	Google/other search engine	Race event
Up to 12 months	0.34	7.48	2.72	0.34
Over 12 months	0.66	14.52	5.28	0.66

	Seeing someone in club merch	Seeing the club in park
Up to 12 months	0.34	0.68
Over 12 months	0.66	1.32

	Word of mouth
Up to 12 months	5.1
Over 12 months	9.9

We still need to be careful of small sample counts on the awareness source, so it would be worth binning the awareness route further. But there's tentative evidence longer standing members heard about the club through Facebook, but more recent members may have been discovering the club through organic search. This may just reflect that Facebook was the most prominent online presence early in the club's history: Members may have searched for the club via Google, with the only discoverable channel being Facebook at that time. Recall bias would mean this was answered as "Facebook" when in fact "Google" is what acted as the discovery vector.

Word of mouth is broadly the same proportionally between older and newer members.

	Club website	Facebook	Google/other search engine	Race event
Up to 12 months	1	3	5	0
Over 12 months	0	19	3	1

	Seeing someone in club merch	Seeing the club in park
Up to 12 months	1	2
Over 12 months	0	0

	Word of mouth
Up to 12 months	5
Over 12 months	10

There may be tentative evidence that the total proportion of members who discover WERC digitally has remained the same, but just split across more digital channels.

! Important

Among newer members, is the higher proportion of hearing about WERC via the website reflective of the time the website has been online?

We can bin the results further into broad categories of “internet”, “real world” and “word of mouth”.

Pearson's Chi-squared test

```
data: tab3
X-squared = 3.3403, df = 2, p-value = 0.1882
```

	Digital	Spotted IRL	Word of mouth
Up to 12 months	10.54	1.36	5.1
Over 12 months	20.46	2.64	9.9

Fisher's Exact Test for Count Data

```
data: tab3
p-value = 0.2107
alternative hypothesis: two.sided
```

After grouping awareness routes into broader categories (Real-world, Digital, Word of mouth), there was no statistically significant association between awareness route and length of membership ($\chi^2(2) = 3.34$, $p = .19$). This suggests that recruitment pathways appear broadly similar across newer and longer-standing members.
